

Colder, Faster, Safer.

A Greener Future for Pain Relief.

Hurri-Freeze® is a topical anesthetic spray designed for rapid, safe pain relief at the point of care. With colder performance and a GWP (Global Warming Potential) 99% lower than HFC topical anesthetic sprays, it's a safer alternative to Ethyl Chloride, a better experience for patients, and a better choice for the planet.

THE FIRST FDA-CLEARED HFO TOPICAL ANESTHETIC SPRAY

Environmentally Friendly

99% lower GWP than HFC sprays

Savings in Every Spray

Compared to competitors

360° Spray

Dispense at any angle with 115 mL canister

Spray Options

Available in mist spray

Superior Performance

Colder and faster than HFC TA blends

Safe to Use

On intact mucous membranes and minor open wounds

Non-Toxic

HAZMAT-free and non-flammable

100% Evaporates

Safely cools skin

Patent Pending

*Converting a 115 mL HFC canister to a 115 mL HFO canister reduces the GWP (Global Warming Potential) impact by the equivalent of 18 gallons of gasoline consumed.

The safest choice for a wide range of uses.

Injections

- IV starts
- Joint and PRP injections
- Vaccinations and venipuncture
- Cosmetic procedures - fillers, pre-lidocaine injections, BOTOX®

Minor surgical procedures

- I&D of abscess, paronychia, bursa
- Lancing boils
- Suturing, stapling
- Wound debridement
- Foreign body removal (e.g., splinters)

Temporary relief of minor sports injuries

- Sprains
- Bruising
- Cuts and abrasions

How to Use

Follow facility's protocol for cleaning the site with an antiseptic, have all equipment ready for the procedure, and then apply spray prior to performing the procedure. The anesthetic numbing effect can last up to 60 seconds. If a procedure takes longer than anticipated, reapply as necessary. *Refer to application instructions for full details.*

Hurri-Freeze Mist Spray

Item #	Product Description
0283-1806-44	115 mL Mist Spray
0283-1809-44	35 mL Mist Spray
